Thieves V.S. an MBF7236 Gun Safe

The thieves tried to get our gun safe in the bedroom by trying to cut the door bolts with a **Sawzall**. They used 5 blades and then gave up. The Mesa Safe didn't give in to the assault. When the saw didn't work, the thieves tried to move it to the garage. After breaking it loose from the floor, the safe fell over and crushed the bed. Then the thieves moved the safe using floor dollies to the garage.

The Mesa Safe was moved out of the backdoor and onto the steps, where they lost control of it and it fell over, crushing the dryer. After all of this they attempted to load it into their truck using a floor jack - but it kept falling off the jack.

I came home early that day and caught them trying to load the safe into their truck. They took off and left the safe lying on the floor in the garage. The thieves took two computers and three handguns that were NOT in the safe, along with a 12 pack of Coke and a bag of ice!

They beat, sawed and pried on my Mesa Safe and it never gave up!

The safe door was still locked, so with the help of my locksmith and Mesa Safe Company, it took three days to finally get into the safe. The pictures show how much abuse the safe went through and it still held strong! The interior padding kept the guns from being damaged due to all the trauma. Mesa builds a quality product; it is able to hold up to a beating and still protect your guns!

Thanks!

BJ Hendrickson
